The present invention relates to a method for treating a subject having neoplasm expressing fibroblast growth factor-5 (FGF-5) comprises modulating an immune response to FGF-5 or FGF-5 expression or activity.

Claim 7; Page 99; 101pp; English.

Treating a subject having a neoplasm expressing fibroblast growth factor-5 (FGF-5), e.g. prostate, breast, bladder, or pancreas carcinoma, comprises modulating an immune response to FGF-5 or modulating FGF-5 expression or activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC FGF is a tumour associated antigen (TAA). The method is useful for CC treating or preventing a neoplasm such as prostate carcinoma, bladder carcinoma, pancreas carcinoma, and renal cell CC carcinoma (RCC) and diseases such as Hippel-Lindau disease, horseshoe CC kidneys, adult polycystic kidney disease and acquired renal cystic CC disease. FGF-5 polypeptides may be used as immunogen in the production of CC antibodies, which are useful in quantitative immunoassays that determine CC concentrations of antigen-bearing substances in biological samples, and CC (semple. The antibodies may also be used to treat FGF-5 expressing or CC overexpressing tumours by decreasing FGF-5 activity, as diagnostic agents CC overexpressing tumour in a patient undergoing therapy for the treatment CC of neoplasm. FGF-5 CDNA is also useful in gene therapy. The present CC sequence is a protein encoded by the open reading frame-2 (ORF-2) of human FGF-5 full length CDNA from clone 10E4-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              modulating an immune response to FGF-5 or FGF-5 expression or activity. CC FGF is a tumour associated antigen (TAA). The method is useful for treating or preventing a neoplasm such as prostate carcinoma, breast CC treating or preventing a neoplasm such as prostate carcinoma, breast CC carcinoma, bladder carcinoma, pancreas carcinoma, and renal cell CC carcinoma (RCC) and diseases such as Hippel-Lindau disease, horseshoe kidneys, adult polycystic kidney disease and acquired renal cystic CC disease. FGF-5 polypeptides may be used as immunogen in the production of CC concentrations of antigen-bearing substances in biological samples, and CC concentrations of antigen-bearing substances in biological samples, and CC concentrations of antigen-bearing substances in biological samples, and CC concentrations by decreasing substances of antigen in a biological sample. The antibodies may also be used to treat FGF-5 expressing or CC overexpressing tumours by decreasing FGF-5 activity, as diagnostic agents CC to monitor the progression or regression of an FGF-5 expressing or CC overexpressing tumour in a patient undergoing therapy for the treatment CC of neoplasm. FGF-5 cDNA is also useful in gene therapy. The present CC sequence is a human FGF-5 peptide from clone 6A4-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches 246;

This sequence represents human fibroblast growth factor 5 (FGF-5), CC including the signal peptide. A claimed method of delaying, preventing or crescuing retinal cells from injury or death without causing angiogenesis CC or mitogenesis comprises administering an active FGF-5 polypeptide such CC as the present polypeptide. The retinal cells are: (a) retinal neurons CC selected from photoreceptors, retinal ganglion cells, displaced retinal CC ganglion cells, amacrine cells, displaced amacrine cells phorizontal and CC pipular neurons; or (b) supportive cells selected from Muller cells and CC pigment epithelial cells. The method is used to treat photoreceptor cell figure or death caused by an ocular disease, retinal injury, light or CC environmental trauma. The ocular disease is especially selected from: CC retinitis pigmentosa; macular degeneration, including age-related; CC retinal detachment; retinal tears; retinopathy; retinal degenerative collasease; macular hole; degenerative myopia; acute retinal necrosis CC syndrome; traumatic chorioretinopathies or contusion, such as Purtscher's CC retinal vision occlusion; collagen vascular diseases; thrombocytompenic CC purpura; uveitis; retinal vasculitis and occlusion associated with Eales CC disease and systemic lupus erythematosus (all claimed)

                                                      CC dermatological, gastrointestinal, hepatic, respiratory, renal and CC cerebroprotective activity. (I) is useful for stimulating epithelial cell CC proliferation in patients suffering from wound, mucositis, ulcer such as cc venous statis ulcer, diabetic ulcer and cubitus ulcer. (I) is also useful for treating inflammatory bowel disease, liver disorder, lung damage, CC diabetes, oral injury, gastrointestinal injury, gut toxicity, gastric cc ulcer, duodenal ulcer, epidermolysis bullosa, skin graft, skin disorder, cc renal failure, brain injury, breast tissue injury, urothelial damage, CC female reproductive tract disorder, intestinal fibrosis, precumonitis, pleural retraction, hemopoletic syndrome cc and myelotoxicity. (I) is also useful for increasing the adherence of cskin grafts to wound beds and to stimulate re-epithelialization from the cound bed, to produce changes in hepatocyte proliferation, to reduce the cside effects of gut toxicity, to regenerate skin in full and partial ct hickness skin defects, and to prevent and heal damage to lungs. KGF-2 cshows enhanced activity, increased stability, higher yield and better csolubility. This sequence represents the fibroblast growth factor FGF5 which is described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antiinflammatory; cytoprotective; dermatological; gastrointestinal; hepatic; respiratory; renal; cerebroprotective; mucositis; treatment; epithelial cell proliferation; inflammatory bowel disease; lung damage; liver disorder; diabetes; oral injury; gastrointestinal injury; gut toxicity; gastric; duodenal; epidermolysis bullosa; skin graft; skin disorder; renal failure; brain injury; intestinal fibrosis; proctitis, female reproductive tract disorder; pulmonary fibrosis; preumonitis; pleural retraction; hemopoietic syndrome; myelotoxicity; preumonitis; pleural retraction; hemopoietic syndrome; myelotoxicity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel keratinocyte growth factor useful for promoting and accelerating wound healing, comprising at least 10 contiguous amino acids from a specific amino acid sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        28-FEB-1997;
23-MAY-1997;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         05-JUN-1995;

The method comprises administering keratinocyte growth factor 2 (KGF-2) Pelta28 to a patient. Also described: (1) a method for stimulating the growth of pulmonary epithelial cells; or (2) a method of preventing mucositis. KGF-2 Delta28 has vulnerary and dermatological activities, and can be used in gene therapy. KGF-2 Delta28 is useful for treating inflammation, stimulating the growth of pulmonary epithelial cells or preventing mucositis. It can also be used for treating epidermolysis bullosa and for promoting wound healing. ABQ82994 to ABQ83130 and ABBF3473 to ABP54111 represent sequences used in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to Keratinocyte Growth Factor 2 (KGF-2)
CC polypeptides and the polynucleotides encoding them. The KGF-2
CC polypeptides are useful for stimulating the proliferation of epidermal
CC cells (e.g. keratinocytes) to prevent or improve the appearance of
CC wrinkles or aged skin, improve skin strength, promote epidermal
CC thickening, reduce scarring or improve healing after cosmetic surgery.
CC thickening, reduce scarring or improve healing after cosmetic surgery.
CC thickening, reduce scarring or improve healing after cosmetic surgery.
CC thickening, reduce scarring or improve healing after cosmetic surgery.
CC theorem of the liver, pancreas, kidney, prostate, bladder,
CC (e.g. epithelial cells of the liver, pancreas, kidney, prostate, bladder,
CC (lung or oceophagus) or promoting wound healing in a wound healing
CC steroids, non-steroid compounds, uraemia, malnutrition, vitamin
CC deficiencies, obesity, infection, immunosuppression, radiation therapy or
CC deficiencies, obesity, infection, immunosuppression, radiation therapy or
CC commotinal surgical procedures such as anastomosis), ulcera, burns,
CC gastrointestinal surgical procedures such as anastomosis, ulcera, burns,
CC etc. The KGF-2 polypeptide is also useful for treating or preventing
CC disease (e.g. ulcerative collitis or crohn's disease), inflammatory bowel
CC disease (e.g. ulcerative collitis or arthritis), a radiation-induced
CC condition (e.g. oral injury, pulmonary fibrosis, myelotoxicity), viral
CC condition, or renal failure (caused by e.g. hepatitis, cirrhosis),
CC pancreatitis, liver failure (caused by e.g. emphysema, lung cancer,
CC asthma), or renal failure. The polypeptide is further useful for
CC radiation, or promoting tissue exposed to radiation (e.g.
CC radiation, or promoting tissue exposed to radiation.
CC after the form of the invention.
CC after the form of the promoting tissue exposed to radiation for the promoting tissue exposed to radiation for the form of the f

(first entry)

```
The invention relates to an isolated polypeptide comprising a sequence CC having 95% identity with amino acid residues 138 (Gly)-208 (Ser), 123 (Val)-208 (Ser), 104 (Glu)-208 (Ser), 77 (Val)-208 (Ser), 208 (Ser), 63 (Ala)-CC 208 (Ser), 36 (Thr)-208 (Ser), 36 (Thr)-208 (Ser), 69 (Ser), 63 (Ala)-CC 208 (Ser), 36 (Thr)-153 (Lys) or 138 (Gly)-208 (Ser) of human keratin growth CC factor-2 (KGF-2) appearing as ADD66111. Also included are an isolated CC polynucleotide encoding the polypeptide, a method of making a recombinant host cell, a recombinant vector, a method of producing the polypeptide, a method of stimulating proliferation of epidermal cells, a method of cell, a recombinant of CC wound healing, a method of treating wounds caused by a colonic or CC wound healing, a method of treating wounds caused by a colonic or CC gastrointestinal surgical procedure, a method of treating or preventing CC reducing inflammation, a method of promoting hair growth, a method of treating inflammatory bowel disease, a method of treating tissue exposed to radiation, a method of promoting urothelial healing, a method of condition or repair in the female CC genital tract, a method of promoting urothelial healing, a method of condition or renal failure. The polypeptide is useful for condition or renal failure. The polypeptide is useful for urothelial healing, hair growth, tissue growth or repair in the female condition in the female of the polypeptide is useful for the condition or renal failure. The polypeptide is useful for the female of the polypeptide is 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           14-FEB-1995;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC residues Arg(80)-Ser(208), Val(77)-Ser(208), Cys(37)-Ser(208), Thr(36)-CC Ser(208) or Met(1)-Ser(208) of fully defined sequence of keratinocyte CC growth factor (KGF-2) having 208 amino acids as given in specification. CC The invention may be useful for the production of compounds with a CC keratolytic or respiratory-Gen activity. The method is useful for CC stimulating proliferation of lung epithelial cells, or inducing CC hyperkeratosis of the buccal mucosa, tongue and oesophagus, where the CC polypeptide is administered to treat or prevent lung diseases or lung CC damage. The lung disease is acute or chronic lung disease, emphysema, CC inhalation injuries, hyaline membrane disease, infant respiratory CC distress syndrome or bronchiopulmonary dysplasia. The lung damage is caused by lung fibrosis. The method enables stimulation of proliferation CC of lung epithelial cells, or induction of hyperkeratosis of the buccal CC mucosa, tongue and oesophagus. The present sequence is that of a CC fibroblast growth factor (FGF) protein which was used to demostrate CC momology to the human KGF protein which may be used in the method of the

The heparin binding VEGFR-3) proteins are used for stimulating lymphangiogenesis or angiogenesis in a mammal, and for modulating the growth of mammalian endothelial cells, mammalian endothelial precursor cells or hematopoletic progenitor cells, mammalian endothelial precursor cells or promoting recruitment, proliferation, differentiation, migration or survival of neuronal cells or neuronal precursor cells, and for treating neurodegenerative disorder, e.g. Alzheimer's diseases, Parkinson's disease, Huntington's disease, e.g. Alzheimer's disease, Amyotrophic Lateral Sclerosis (ALS), dementia, or cerebral palsy. The present sequence represents a human heparin binding protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New heparin-binding Vascular Endothelial Growth Factor Receptor 3 ligands comprising prepro-VEGF-C, prepro-VEGF-D sequences or fragments, for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents human fibroblast growth factor 5 (FGF-5) mature CC polypeptide. A claimed method of delaying, preventing or rescuing retinal CC cells from injury or death without causing angiogenesis or mitogenesis CC comprises administering an active FGF-5 polypeptide such as the present CC polypeptide. The retinal cells are: (a) retinal neurons selected from CC photoreceptors, retinal gangilon cells, displaced retinal gangilon cells, displaced retinal gangilon cells of the photoreceptors of the supportive cells selected from Muller cells and pigment epithelial CC caused by an ocular disease, retinal injury, light or environmental CC trauma. The ocular disease, retinal injury, light or environmental CC pigmentos; macular degeneration, including age-related; retinal cC detachment; retinal tears; retinopathy; retinal degenerative diseases; cmacular holes; degenerative myopia; acute retinal necrosis syndrome; cc traumatic chorioretinopathies or contusion, such as Purtscher's cc retinopathy; oedema; ischemic conditions such as central or branch cc purpura; uveitis; retinal vasculitis and occlusion associated with Eales of disease and systemic lupus erythematosus (all claimed)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

This sequence represents human fibroblast growth factor 5 (FGF-5) mature CC polypeptide. A claimed method of delaying, preventing or rescuing retinal CC cells from injury or death without causing angiogenesis or mitogenesis CC comprises administering an active FGF-5 polypeptide such as the present protoreceptors, retinal cells are: (a) retinal neurons selected from CC photoreceptors, retinal ganglion cells, displaced retinal ganglion cells, borizontal and bipolar neurons; CC or (b) supportive cells selected from Muller cells and bipolar neurons; CC cells. The method is used to treat photoreceptor cell injury or death CC caused by an ocular disease is especially selected from: retinal cC cells. The ocular disease is especially selected from: retinitis CC detachment; retinal tears; retinopathy; retinal degenerative disease; CC macular holes; degenerative myopia; acute retinal necrosis syndrome; CC traumatic chorioretinopathies or contusion, such as Purtscher's CC traumatic chorioretinopathies or contusion, such as central or branch CC retinal vision occlusion; collagen vascular disease; thromboytompenic CC disease and systemic lupus erythematosus (all claimed)
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches 215;

                                                                                                                                                                                                                                                                                                                              treating or preventing a neoplasm such as prostate carcinoma, breast carcinoma, bladder carcinoma, pancreas carcinoma, and renal cell carcinoma (RCC) and diseases such as Hippel-Lindau disease, horseshoe kidneys, adult polycystic kidney disease and acquired renal cystic disease. FGF-5 polypeptides may be used as immunogen in the production of antibodies, which are useful in quantitative immunoassays that determine concentrations of antigen-bearing substances in biological samples, and to (semi-)quantitatively identify the presence of antigen in a biological sample. The antibodies may also be used to treat FGF-5 expressing or overexpressing tumours by decreasing FGF-5 activity, as diagnostic agents to monitor the progression or regression of an FGF-5 expressing or overexpressing tumour in a patient undergoing therapy for the treatment of neoplasm. FGF-5 CDNA is also useful in gene therapy. The present sequence is a human FGF-5 peptide from clone 6A4-1
                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  neoplasm expressing fibroblast growth factor-5 (FGF-5) comprises modulating an immune response to FGF-5 or FGF-5 expression or activity FGF is a tumour associated antigen (TAA). The method is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a method for treating a subject having neoplasm expressing fibroblast growth factor-5 (PGP-5) comprises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    expression or activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Treating a subject having a neoplasm expressing fibroblast growth factor-5 (FGF-5), e.g. prostate, breast, bladder, or pancreas carcinoma, comprises modulating an immune response to FGF-5 or modulating FGF-5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2001-290607/30.

FGF-1 to -9 may be used, pref. FGF-1 (AAR70812), FGF-5 (AAR70813), FGF-7 (AAR70814) or FGF-1 (AAR70815) muteins, in which at least 1 Cys residue is replaced by conservative Ser substitutions. The fusion proteins are potent cytocidal agents to cells bearing the FGF receptor. (Updated on 25-MAR-2003 to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    B
                                                                                                                                                     CC AAR80776-84 are fibroblast growth factors (FGF) FGF-1 to FGF-9 CC crespectively. DNA encoding these fibroblast growth factors can be used to CC create an FGF/saporin fusion protein. DNA encoding such fusion proteins CC are useful for targetting saporin (a cytotoxin) to a cell carrying the CC include in partic. DNA encoding a therapeutic protein, antisense DNA or CC include in partic. DNA encoding a therapeutic protein, antisense DNA or CC conjugates of the invention are used to inhibit cell proliferation in CC cells carrying the particular growth factor receptor; also when TA is DNA CC it can be used to deliver this to cells (for gene therapy). A specific copplication is to prevent excessive proliferation of epithelial cells, CC ibroblasts and keratinocytes in the anterior eye after surgery, partic. CC to prevent recurrence of pterygii after surgical removal, closure of crabeculectomy after glaucoma surgery and corneal clouding after excimer CC laser treatment. Other conditions which may be treated include tumours, CC restenosis, psoriasis, Dupuytren's contracture, diabetic complications, CC Kaposi's sarcoma and rheumatoid arthritis

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         seq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Published Applications AA New:*

 are useful for targetting saporin (a cytotoxin) to a cell carrying the FGF receptor. Targetted agents (TA) other than saporin which may be used include in partic. DNA encoding a therapeutic protein, antisense DNA or other cytotoxic agent. The linker sequence within the fusion protein may increases serum stability or intracellular availability of the TA. The conjugates of the invention are used to inhibit cell proliferation in cells carrying the particular growth factor receptor; also when TA is DNA it can be used to deliver this to cells (for gene therapy). A specific application is to prevent excessive proliferation of epithelial cells, fibroblasts and keratinocytes in the anterior eye after surgery, partic. to prevent recurrence of pterygil after surgical removal, closure of trabeculectomy after glaucoma surgery and corneal clouding after excimer laser treatment. Other conditions which may be treated include tumours,

 This is the amino acid sequence of fibroblast growth factor-5 (FGF-5). Claimed DNA molecules of the invention encode FGF mutein polypeptides (see AAW75711-20) that show reduced FGF receptor binding activity but which retain the ability to bind heparin. For FGF-5, amino acid residues 162, 169 and 172 are preferably replaced by other amino acid residues, with an optional further replacement of the Glu-164 residue. The mutein may be further modified by replacement of the Cys residues to reduce aggregation. The mutein is obtained by site-specific or site-directed mutagenesis of FGF-5 DNA, incorporation of the mutated DNA into a vector and expression in host cells. The FGF muteins are used to treat heparin-related disorders, such as excessive bleeding induced by heparin, ophthalmic disorders and heparin-associated thrombocytopenia and thrombosis. They may also be used for drug design

 This invention describes a novel human fibroblast growth factor, PRO533, CC also known as fibroblast growth factor-19 (FGF-19). The nucleic acids, cc methods and PRO533 polypeptides disclosed may be used in the diagnosis and treatment of tumours and/or conditions characterized by modulation of PRO533 expression, or in the preparation of compositions for such the the properation of compositions for such cc therapies. These compositions and methods may be used in the diagnosis and treatment of neoplastic cell growth and proliferation in mammals (especially humans). The invention is based on the identification of genes that are amplified in the genome of tumour cells. Such gene camplification is expected to be associated with the over expression of the gene product and contribute to tumourgenesis and/or autocrine signalling. Accordingly, the proteins encoded by the amplified genes are believed to be useful targets for the diagnosis and/or treatment of certain cancers and may act as predictors of the prognosis for tumour

 This sequence represents human fibroblast growth factor 5 (FGF-5). The CC invention relates to isolated nucleic acids encoding FGF muttein CC polypeptides. FGF mutteins that exhibit increased binding affinity for FGF CC receptors and reduced mitogenic activity are provided. Such muteins have amino acid replacements at positions corresponding to position 138 (claim CC 1) of FGF-2 (see AAY3234). They can be used to prevent or inhibit the CC undesired growth and proliferation of FGF-responsive cells. Such cells CC cell proliferation, such as rheumatoid arthritis, tumour angiogenesis, CC (Kaposi's sarcoma, restenosis, in-stent restenosis, certain ophthalmic CC disorders and dermatological disorders, such as psoriasis. Also provided are FGF muteins that exhibit reduced receptor binding activity, but CC replacements corresponding to positions 88 (Claim 5) and 93 (Claim 7) and CC metain the ability to bind heparin. These muteins have amino acid CC replacements corresponding to positions 88 (Claim 5) and 93 (Claim 7) and CC metain the ability to bind heparin. These muteins have amino acid CC replacements corresponding to positions 88 (Claim 5) and 93 (Claim 7) and CC metain the ability to bind heparin. These muteins have amino acid CC replacements corresponding to positions 88 (Claim 5) and 93 (Claim 7) and CC metain the special particular for CC heparin-associated bleeding, antagonises of heparin-induced angiogenesis, and for treating heparin-induced thrombocytopenia and thrombosis. In CC greferred muteins, the native FGF amino acid is replaced by Ala, Phe, CC Cys residues may also be substituted to reduced polypeptide aggregation

The invention relates to a novel gene delivery composition for the targetted delivery of cytotoxins or prodrug-converting enzymes to proliferating cells. The gene delivery composition comprises a protein that binds the fibroblast growth factor receptor (FGPR) which is fused or chemically conjugated to a nucleic acid binding domain. The nucleic acid binding domain is complexed with a suitable expression construct encoding a cytotoxin such as saporin. One or more linkers may join the FGPR-binding protein to the nucleic acid binding protein. These are selected to increase the specificity, toxicity, solubility, serum stability or intracellular availability, and may serve to promote condensation of nucleic acids for delivery to a cell. The fusion protein binds to FGPR and is internalised by cells that carry this receptor. The gene delivery

 composition is used for the therapeutic alteration of the function, gene expression and viability of cells. In particular, it may be used for the treatment and prevention of cell proliferative disorders, for example after eye surgery, melanoma and many other sorts of cancer, rheumatoid arthritis, restenosis, Dupuytren's contracture, diabetic retinopathy, psoriasis and eczema. The gene delivery compositions of the invention have high specificity for particular cells and can deliver larger amounts of DNA compared to prior art methods. Sequences AAY90410- AAY90418 represent members of the fibriblast growth factor (FGF) family of proceins. AAY90448 represents wild-type human FGF-2 (basic FGF, bFGF) which is encoded by AAA12868 AAA12897-AA12900 encode the human FGF-2 muteins AAY90461-Y90464, and AAY90465-Y90466 represents a mutagenised FGF-2 muteins used in the invention. AAY90450 represents a mutagenised

CC The present invention relates to a method for treating a subject having CC neoplasm expressing fibroblast growth factor-5 (FGF-5) comprises CC modulating an immune response to FGF-5 expression or activity. FGF is a tumour associated antigen (TAA). The method is useful for CC treating or preventing a neoplasm such as prostate carcinoma, breast CC carcinoma, bladder carcinoma, pancreas carcinoma, and renal cell CC carcinoma (RCC) and disease such as Hippel-Lindau disease, horseshoe kidneys, adult polycystic kidney disease and acquired renal cystic CC disease. FGF-5 polypeptides may be used as immunosen in the production of CC disease. FGF-5 polypeptides may be used as immunosessys that determine CC concentrations of antigen-bearing substances in biological samples, and CC (semi-) quantitatively identify the presence of antigen in a biological cample. The antibodies may also be used to treat FGF-5 expressing or CC coverexpressing tumours by decreasing FGF-5 activity, as diagnostic agents CC to monitor the progression or regression of an FGF-5 expressing or coverexpressing tumour in a patient undergoing therapy for the treatment of neoplasm. FGF-5 cDNA is also useful in gene therapy. The present
 Treating a subject having a neoplasm expressing fibroblast growth factor-5 (FGF-5), e.g. prostate, breast, bladder, or pancreas carcinoma, comprises modulating an immune response to FGF-5 or modulating FGF-5 expression or activity.

The present sequence is fibroblast growth factor-5 (FGF-5) from human. CC This protein is a member of the FGF family. The present invention relates CC to novel human zFGF10 protein and its DNA. zFGF-10 is a homologue of CC fibroblast growth factor (FGF). The zFGF10 sequences and their antibodies CC are useful for identifying and isolating neuronal, prostatic and CC generatic cell proliferation. They are used in the treatment of CC disorders associated with diabetes mellitus, neural cell development or CC degeneration, amyotrophic lateral sclerosis, cerebro- vascular stroke, CC neuropathy associated with lack of maintenance of neuronal neuropathy associated with lack of maintenance of neuronal development. zFGF-10 sequences are used for promoting CC complications related to poor circulation such as diabetic foot ulcers, CC for stroke, following coronary reperfusion and for improving cardiac CC function. They are used to protect and promote the recovery of the mucosa after treatment with chemotherapy and/or radiation and to reduce cells, particularly in the heart or brain. They are also used for the events, particularly in the heart or brain. They are also used for the cevents, particularly in the heart or brain. They are also used for the cells, epidermal cells or keratimocytes and pulmonary hypertension. CC cells, epidermal cells or keratimocytes. The zFGF-10 antagonists are used CC to treat psoriasis associated with keratinocyte. zFGF-10 binding proteins cc useful for treating neuroblastoma, glioblastoma, prostatic carcinoma and pancreatic carcinoma

 The invention provides a human fibroblast growth factor (FGF)-23 polypeptide. The encoding DNA insert is contained in ATCC Deposit No. PT. 1617. FGF-23 can be expressed by standard recombinant methodology. The FGF-23 polypeptides, polynucleotides, modulators and antibodies are useful for treating, preventing, or ameliorating an FGF-23 polypeptide-related disease, condition or disorder especially autosomal dominant hypophosphatemic rickets (ADHR). They are also useful for diagnosing a pathological condition and for stimulating angiogenesis, promoting wound healing and treating disorders of the liver. Sequences AABS-812-29

The invention discloses a gene delivery composition comprising a collect acid molecule. The nucleic acid molecule is chemically conjugated or fused to the polypeptide that binds to an FGF receptor. The delivery composition binds to an FGF receptor and is internalised specifically in cells bearing the FGF receptor. The invention relates to the treatment (e.g. gene therapy) of diseases (e.g. hyperproliferative disorders and complastic diseases) and, more specifically to the preparation and use of complexes containing receptor-binding internalised ligands, nucleic acid binding domain (NABD) and cytocide-encoding agents to alter the complexes containing receptor-binding internalised ligands, nucleic acid binding domain (NABD) and cytocide-encoding agents to alter the complexes containing receptor-binding internalised ligands, nucleic acid molecule is a prodrug-encoding agent the alter the complexes are altered in an activating protein, preferably a saporin, gelonin or diptheria toxin. It also encodes its elongation factor and further comprises a tissue-specific promoter operably linked to the molecule. The prodrug-encoding agent encodes a tissue-specific promoter operably linked to the molecule. The prodrug-encoding agent encodes a prodrug-encoding agent encodes a prodrug-encoding agent encodes a prodrug-encoding agent encodes a prodrug-encoding agent encodes a prodrug-encoding agent encodes a prodrug-encoding agent encodes a prodrug-encoding agent encodes a prodrug-encoding agent encodes a prodrug-encoding agent encodes and proprecipitation factor and further comprises a tissue-specific promoter operably linked to the molecule.  CC The invention describes a pharmaceutical composition comprising receptor-
CC binding internalised ligand-nucleic acid binding domain-cytocide-encoding
CC agent. The receptor-binding internalised ligand is a polypeptide reactive
CC with a cell surface receptor. The nucleic acid binding domain binds to a
nucleic acid and is chemically conjugated or fused to the receptor-
CC binding internalised ligand. The cytocide-encoding agent is a nucleic
CC acid molecule encoding a cytocide and is bound to the nucleic acid
CC binding domain. The receptor-binding internalised ligand-nucleic acid
CC binding domain-cytocide-encoding agent binds to the cell surface receptor
CC and internalises the cytocide-encoding agent in cells bearing the
CC receptor. The pharmaceutical composition is useful for preventing
CC excessive cell proliferation in the eye or for treating cancer or smooth
CC muscle cell hyperplasia. This is the amino acid sequence of a fibroblast
CC growth factor (FGF) that can be modified and used as a receptor binding
CC ligand of the invention.

 This sequence represents fibroblast growth factor-5 (FGF-5). FGF-5 is a renal cell carcinoma-associated antigen. Peptide fragments derived from FGF-5 were used to elicit an immune response in a subject, by administering to a subject a first dose of a therapeutic amount of the peptide. They may also be used for treating a FGF-5 expressing tumour in a subject and for generating antibodies specific for an FGF-5 antigen. In eliciting an immune response in a subject, the immune response elicited is against an FGF-5 human leukocyte antigen (HLA)-A2 epitope, and the peptide comprising ADS20325 is administered resulting in elicitation of the immune response against the FGF-5 HLA-A2 epitope. The method elicits an immune response against the renal cell carcinoma. The subject has an FGF-5 expressing tumour, particularly an adenocarcinoma or renal cell
 New human leukocyte antigen (HLA)-A3 and HLA-A2 epitopes of fibroblast growth factor-5 (FGF-5) for eliciting an immune response in a subject for treating an FGF-5 expressing tumor, e.g. renal cell carcinoma.

 treating or preventing a neoplasm such as prostate carcinoma, breast carcinoma, bladder carcinoma, pancreas carcinoma, and renal cell carcinoma (RCC) and diseases such as Hippel-Lindau disease, horseshoe kidneys, adult polycystic kidney disease and acquired renal cystic disease. RGF-5 polypeptides may be used as immunogen in the production of antibodies, which are useful in quantitative immunoassays that determine concentrations of antigen-bearing substances in biological samples, and to (semi-)quantitatively identify the presence of antigen in a biological sample. The antibodies may also be used to treat FGF-5 expressing or overexpressing tumours by decreasing FGF-5 activity, as diagnostic agents to monitor the progression or regression of an FGF-5 expressing or overexpressing tumour in a patient undergoing therapy for the treatment of neoplasm. FGF-5 cDNA is also useful in gene therapy. The present sequence is a human FGF-5 peptide from clone 6A4-1
 The present invention relates to a method for treating a subject having neoplasm expressing fibroblast growth factor-5 (FGF-5) comprises modulating an immune response to FGF-5 or FGF-5 expression or activity. FGF is a tumour associated antigen (TAA). The method is useful for
 Claim 7;
 expression or activity.
 Treating a subject having a neoplasm expressing fibroblast growth factor-5 (FGF-5), e.g. prostate, breast, bladder, or pancreas carcinoma, comprises modulating an immune response to FGF-5 or modulating FGF-5

 or (b) supportive cells selected from Muller cells and pigment epithelial cells. The method is used to treat photoreceptor cell injury or death caused by an ocular disease, retinal injury, light or environmental trauma. The ocular disease is especially selected from: retinitis pigmentoss; macular degeneration, including age-related; retinal detachment; retinal tears; retinopathy; retinal degenerative diseases; macular holes; degenerative myopia; acute retinal necrosis syndrome; traumatic chorioretinopathies or contusion, such as Purtscher's retinopathy; oedema; ischemic conditions such as central or branch retinal vision occlusion; collagen vascular diseases; thrombocytompenic purpura; uveitis; retinal vasculitis and occlusion associated with Eales disease and systemic lupus erythematosus (all claimed)

 Sequence 247 AA;
 This sequence represents human fibroblast growth factor 5 (FGF-5) mature polypeptide. A claimed method of delaying, preventing or rescuing retinal cells from injury or death without causing angiogenesis or mitogenesis comprises administering an active FGF-5 polypeptide such as the present polypeptide. The retinal cells are: (a) retinal neurons selected from photoreceptors, retinal ganglion cells, displaced retinal ganglion cells, amacrine cells, displaced amacrine cells, horizontal and bipolar neurons;
